

AMERICAN TELEPHYSICIANS

Your Innovation & Growth Partner for International Programs

Physician-led · Founded and headquartered in the US · Operating deployments across three continents

The Gap

The ground under international programs is shifting: governments no longer simply send patients abroad — they expect US health systems to help build local programs and capacity, with technology-enabled specialty care at the center. Two old walls make that hard: the patient journey, and continuity, end at the airport; and physical expansion abroad requires capital few systems can attempt. American TelePhysicians (ATP) partners with health systems to meet the new demand — virtual command center-led specialty programs that build local capacity under your clinical leadership, extending your care beyond the visit and your system into new markets.

GROW — Your International Program

- Post-treatment continuity programs: structured virtual follow-up and remote monitoring after discharge — delivered by your physicians, under your brand, as a billable service line
- In-country execution: ATP coordinates exams, labs, and prescriptions in the patient's home country through care navigators, local partners, and international physicians as needed
- Pre-arrival coordination and, over time, clinically qualified patient pathways from ATP's networks abroad
- Longitudinal outcomes data that strengthens embassy, ministry, and sponsor contracting

EXPAND — Into New Markets

- International virtual campuses: your clinical programs, delivered through ATP-built virtual specialty command centers with local hospital partners — at a fraction of the cost and timeline of physical expansion
- Hybrid virtual-procedural centers of excellence: co-branded specialty programs with training, proctoring, protocols, and joint research — without capital exposure
- Modular command centers that scale across specialties — cardiology and EP, neurology, nephrology, behavioral health
- Government-scale programs: your clinical brand and governance + ATP's national virtual hospital deployment capability

Two ways to begin: launch an International Continuity Program pilot in one service line — specialist follow-up and monitoring for discharged patients, billable under your brand — or scope a virtual specialty campus via a joint feasibility assessment with a local partner in your target market.

Why ATP

- Physician-designed: ATP's virtual care programs are designed by practicing, US board-certified physicians — built to extend your clinicians' reach, never to compete with them for consultations
- What ATP provides: program design, the affordable, customizable SmartClinix platform (telehealth, records intake, RPM — interoperable with your existing workflows), and the human resources for care navigation, including international physicians as needed
- Proven international experience: active programs and partnerships across the Middle East, Asia, and Africa — including ministry-of-health-led virtual care deployments and national-scale digital health programs
- A partner at home too: domestic virtual specialty coverage for US health systems, senior care organizations, and health plans — teleneurology and telestroke, nephrology, cardiology, behavioral health
- Clinical governance stays with your medical staff; ATP operates under structured service agreements with defined roles, protocols, and liability allocation
